Professional Summary

Senior Full Stack Engineer with 4+ years delivering production web and mobile applications across fintech, SaaS, healthcare, and clean energy. Proficient in React, Angular, TypeScript, Node.js, NestJS, and Ruby on Rails, with experience in microservices architecture, REST and GraphQL APIs, identity systems using Okta IDX, and LLM integration. Led frontend teams across multiple client engagements in an agile environment, migrated 7 authentication flows for a Fortune 500 fintech client from a Rails monolith to Angular 19 with a NestJS BFF, and shipped AI-native features in production including real-time LLM streaming and async content generation.

Work Experience

MindHYVE.ai, Inc.

Senior Full Stack Engineer – Contract

Islamabad – Hybrid

Jan 2026 – Present

- **Real-Time AI Tutor:** Built a streaming AI chat interface on web and mobile using SSE (Server-Sent Events) with a 50ms token-batching render pipeline for smooth real-time LLM responses without UI blocking or excessive re-renders.
- **LLM Content Pipeline:** Integrated OpenAI and Azure AI APIs to power async curriculum generation, lesson content creation, and practice question generation, all processed via background workers to keep the frontend responsive.
- **AI-Powered Features:** Built 5 production LLM features on the Engage platform: dashboard intelligence narratives, applicant screening insights, ambassador recruitment coaching, marketing caption generation, and support ticket auto-summarization.
- **Cross-Platform SDK:** Designed a platform adapter pattern for a shared TypeScript API client, separating token storage and auth handling into swappable web and mobile adapters for consistent API access across React and React Native.
- **Shared Package Ecosystem:** Built @arthurai/stores from scratch, a factory-pattern Zustand state management library supporting any storage backend (localStorage for web, MMKV for mobile, in-memory for tests).
- **Dynamic Dashboard UI:** Built a fully customizable student dashboard with drag-to-reorder sections, visibility toggles, haptic feedback, and MMKV-persisted layout with schema versioning and forward-migration logic.
- **Multi-Tenant SaaS:** Contributed to a multi-edition SaaS platform (VLE, ULE, SLE, CLE) serving institutions across Pakistan (NAVTC government program), Kenya, and the USA from a single NestJS backend.

Devsinc

Senior Software Engineer

Lahore – Hybrid

Jul 2024 – Jan 2026

- **Auth Flow Migration:** Migrated 7 authentication flows from a Ruby on Rails monolith into a dedicated Angular 19 app using the Okta IDX API, covering login, MFA (email and phone), forgot password, forgot username, temporary password, self-service unlock, and account creation.
- **NestJS BFF:** Built a NestJS BFF to handle API orchestration between the Angular app and MuleSoft endpoints, managing non-Okta flows like forgot username and account creation without exposing service dependencies to the frontend.
- **Cross-App Session Management:** Implemented Okta SSO session propagation across the new Angular app, legacy Rails app, and multiple Angular micro frontends owned by other teams, ensuring uninterrupted session continuity as traffic shifted from the monolith to microservices.
- **Mobile App Development:** Built and released iOS and Android apps using Angular Ionic, reusing the same auth flow implementations and codebase across web and mobile to eliminate duplicate development effort.
- **Feature Flag Integration:** Integrated Optimizely into the Angular app to gate auth flow releases during the Rails-to-Angular migration, enabling controlled traffic shifts without disrupting active users.
- **Audience and Traffic Management:** Owned all flag creation and audience configuration in Optimizely, building

device and platform-based audience rules to route web and mobile traffic independently as the iOS and Android apps launched alongside the existing web experience.

- **Team Leadership:** Led frontend developers across multiple client projects, running sprint planning, code reviews, and cross-team alignment to keep delivery on track.

Software Engineer

Jul 2023 – Jun 2024

- **System Migration:** Migrated from ERB/Vue.js to React Remix, developed new API endpoints, boosting UI performance by 40% and reducing response times by 26%.
- **Shopify API Transition:** Migrated existing Shopify integration from REST to GraphQL, improving query speed and flexibility by 29%.
- **DB Optimization:** Reduced unnecessary data fetching by 40% via GraphQL API improvements, resulting in a 33% reduction in database size and cache memory usage.
- **Built For Shopify:** Achieved "Built for Shopify" certification by optimizing scalability, speed, and security, resulting in a 22% increase in user satisfaction and a 15% boost in app adoption.
- **Buy Button Integration:** Extended Shopify's native buy button to carry custom product options through to checkout, resolving a platform limitation that dropped customization data on direct purchases and boosting conversion rates by 25%.
- **Server Migration:** Migrated deployment infrastructure from DigitalOcean to Hetzner and Coolify, reducing hosting costs by 20% and improving deployment workflows.
- **Okta Widget Upgrade:** Upgraded a decade-old Okta widget from version 6 to 7 with no existing documentation, delivering the upgrade in 6 months in collaboration with the Okta team and releasing it behind an Optimizely feature flag.
- **Voice OTP Authentication:** Enabled and integrated Okta's voice call OTP feature, building the enrollment UI and wiring up the verification flow to give users an additional MFA option alongside SMS.
- **Streamlined Deployments:** Decoupled login functionality into React-based pages, reducing deployment conflicts by 30% and team dependencies by 17%.

Associate Software Engineer

Jul 2022 – Jun 2023

- **SMS MFA Enrollment:** Built the complete SMS MFA enrollment flow from scratch for a fintech client, covering phone number input, carrier validation, OTP delivery, and OTP verification, with MuleSoft endpoint integration via service calls.
- **Password Validation Component:** Built a reusable JavaScript and jQuery password complexity component enforcing rules across multiple authentication pages, adopted by other teams across the application.
- **Real-Time Rider Tracking:** Integrated Mapbox into a React Native healthcare app with 5-second polling to update rider location pins live on the map, used by both patients tracking their rider and admins monitoring all active rides.
- **Production Orders Feature:** Built an end-to-end production orders feature for a clean energy platform covering supplier parts selection, order submission, and order review workflow, with a React frontend, NestJS service layer, and Rails background jobs for order processing.
- **Queue-Based Dependency Resolution:** Resolved a complex circular dependency across 4-5 nested NestJS modules by decoupling the injection chain using Bull queues, passing required data through job params and processing updates asynchronously.
- **Automated Testing:** Developed automated test cases using RSpec, reducing manual testing efforts by 50% and improving overall code reliability.
- **Code Quality:** Applied DRY coding principles across multiple codebases, reducing redundancy and improving long-term maintainability.

Systems Limited

Internship

Lahore - Onsite

Sep 2021 – Nov 2021

- **JavaScript Fundamentals:** Learned core JavaScript concepts such as variables, functions, events, and DOM manipulation.
- **Salesforce Understanding:** Gained a clear understanding of the Salesforce MVC architecture and how different components interact.

- **Component Development:** Built simple UI components using JavaScript and Salesforce tools to strengthen practical development skills.

Projects

ArthurAI™ (EdTech / AI SaaS)

mindhyve.ai

Multi-tenant AI-native LMS with real-time streaming AI tutor, LLM-powered curriculum generation, adaptive assessments, and cross-platform delivery (React/NestJS web + Expo mobile). Deployed across Pakistan (NAVTTTC government program), Kenya, and the USA.

MindHYVE Engage (Ambassador SaaS)

mindhyve.ai

Enterprise ambassador management platform with 5 AI-powered features, Stripe payments, Twilio WhatsApp, and Microsoft Teams integrations. Serving 146+ ambassadors across recruitment, onboarding, and commission tracking workflows.

OMF (Fintech)

onemainfinancial.com

Customer identity and access management platform for a Fortune 500 personal finance company. Built a dedicated Angular 19 app with a NestJS BFF, migrating 7 auth flows from a Rails monolith using Okta IDX API, with iOS and Android apps built in Angular Ionic and traffic managed via Optimizely feature flags.

PC - Product Options (E-Commerce)

[product-customizer](https://product-customizer.com)

Shopify app enabling merchants to offer unlimited product customization options including engravings, color swatches, and image uploads. Built on React Remix with a GraphQL Shopify API integration, achieving "Built for Shopify" certification and a 15% boost in app adoption.

Orbit Health (HealthCare)

orbithealth.com

Remote mental health care platform serving hospitals, correctional facilities, and clinics. Built React Native features including real-time rider tracking with Mapbox and 5-second polling, used by both patients and admins to monitor active rides.

Powur (Clean Energy)

powur.com

Residential solar sales and fulfillment platform for solar installers and Powur representatives. Built full-stack features across a React frontend, NestJS microservices, and Rails backend, including an end-to-end production orders feature and Bull-based background job processing.

Skills

Languages: JavaScript (ES6), TypeScript, Ruby, HTML, CSS, SQL

Frontend: React.js, Angular, Next.js, Ionic, Vite, Tailwind CSS, Radix UI, Material-UI, Framer Motion, Redux, Zustand, TanStack Query, React Hook Form, Zod

Backend: Node.js, NestJS, Express.js, Ruby on Rails, Prisma ORM, GraphQL, REST, JWT, Stripe, Twilio, Sidekiq

AI & LLM: OpenAI API, Azure AI Foundry, LLM Integration, SSE Streaming, Prompt Engineering, AI Content Generation

Databases: PostgreSQL, MongoDB, Redis, MySQL, Azure Cosmos DB

Cloud & DevOps: AWS, Azure, Docker, GitHub Actions, CI/CD, Nginx, Vercel, Hetzner, Coolify, DigitalOcean

Mobile & Testing: React Native, Expo, Vitest, Jest, Playwright, Maestro (E2E), RSpec, K6

Tools & Practices: Agile Scrum, Optimizely, Bull, Mapbox, GitHub, Jira, Confluence, pnpm Monorepo, Multi-tenant SaaS, Event-Driven Architecture

Education

University of Central Punjab

Bachelor of Science - BS, Computer Science

Pakistan

Graduated
